

Solution Overview

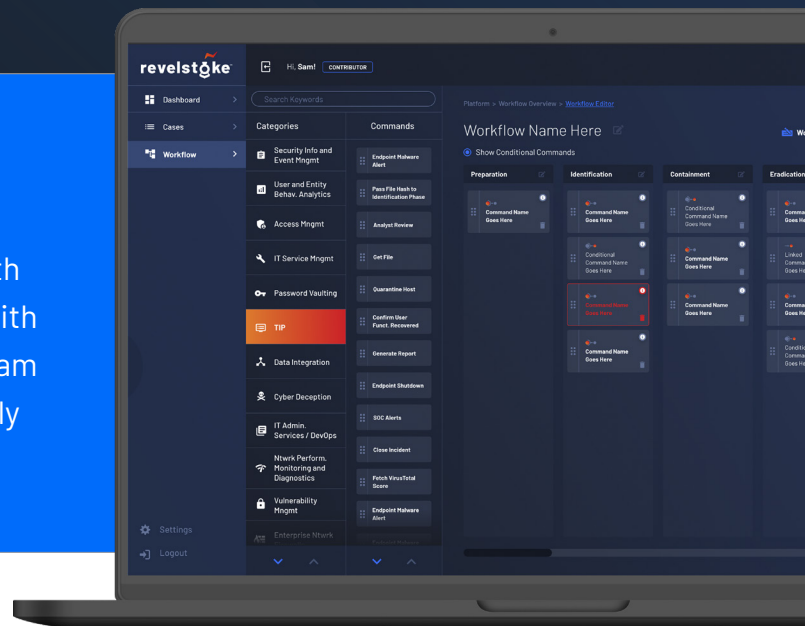

Radically Simple SOAR for Radically Effective Teams

State of the SOC Today

Every day is an uphill battle for the SOC analyst. Against relentless and increasingly clever threat actors. Against time to find and prioritize the threats that really matter. Against the absurdly complicated technology products supposed to help analysts do their job but only add to the noise. It's time that analysts stop fighting uphill, and instead, start running downhill to realize a smarter, better, faster way to SOAR.

Revelstoke is a radically simple security orchestration, automation and response (SOAR) platform that empowers analysts with effortless automation and provides CISOs with comprehensive insight so the entire SOC team can work faster, smarter and more efficiently to defend their networks.

What Makes Revelstoke Different

Low-code Interface

With our drag-and-drop visual interface users can create custom playbooks in seconds.

Speed

Automate everything so you can work faster at identifying and responding to threats that matter.

Measurement

Measure time efficiencies gained through automation and correlate with dollars saved.

Playbooks

Low-code playbooks that automate the most common processes. Create your own in minutes.

Ease of Use

Simple and intuitive, with minimal training to implement and operate.

Compatibility

Revelstoke includes all of the most common integrations out-of-the-box. Easily add any tool you need.

Transparency

Users at all levels of the security team can see chain of custody, actions taken and efficiencies gained.

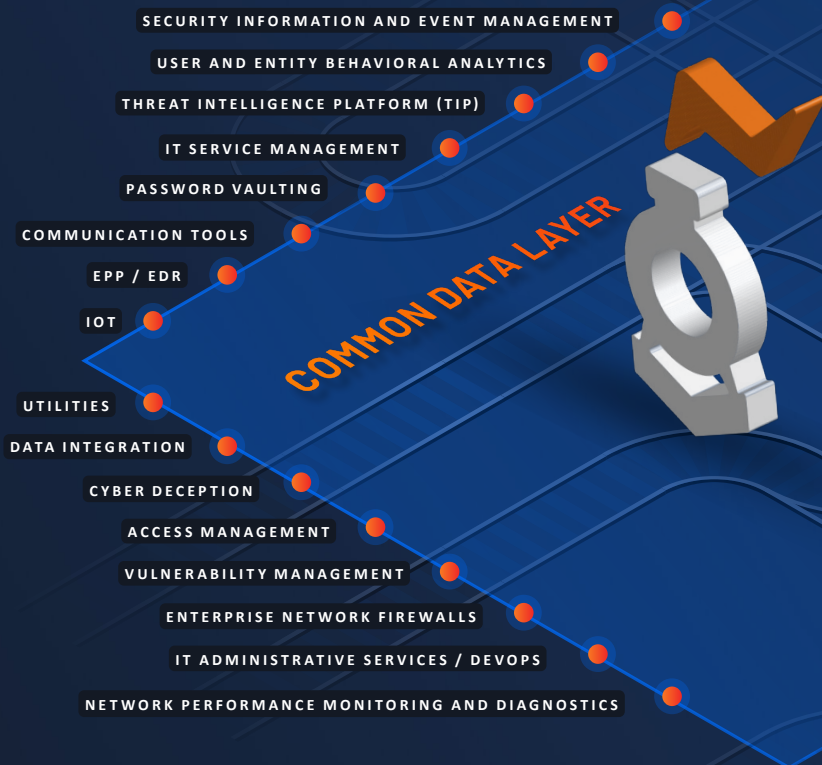

How it Works

Common Data Layer

The magic of Revelstoke is in the Common Data Layer. We built the framework to connect the dots between the various systems, code languages, versions and tech stacks that your SOC depends on. All it takes is an API key for each product and setup can be completed in seconds.

Plus, you can run any integration in simulation mode to run playbooks and investigate incidents without touching your own data.

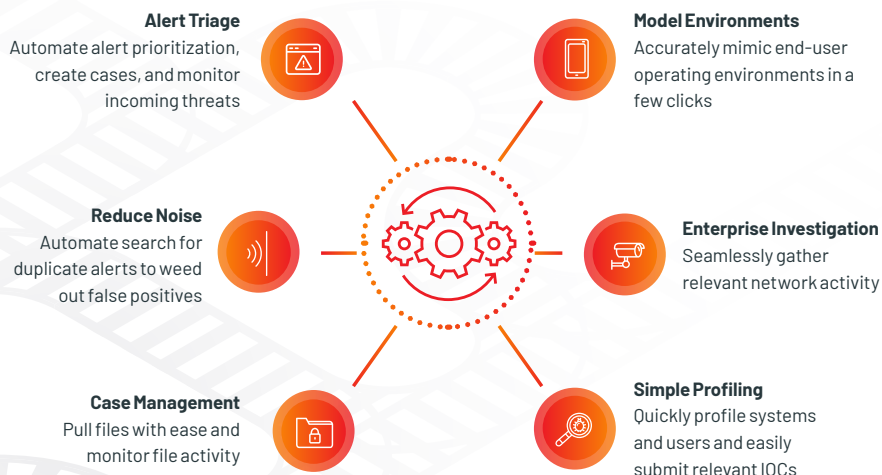

Benefits

Work Smarter. Measure the Impact.

With Revelstoke, you'll gain immediate operational efficiencies. Thanks to the low-code, drag-and-drop UI, common data layer, and pre-built playbooks your team will be up and running with minimal training or onboarding required.

From a business perspective you will measure the cost savings due to automation, improve collaboration, and maximize the effectiveness of your people and tools.

From the initial alert, through case management, Revelstoke makes it easier to get the job done.

About Revelstoke:

Revelstoke radically simplifies security orchestration, automation and response (SOAR) so that security teams can work faster, smarter and more effectively. With a low-code, drag-and-drop interface, built-in integrations, incredible visibility into performance metrics, and accessible, visualized reporting capabilities, Revelstoke empowers analysts to stop threats fast, and gives CISOs a clear picture on the business impact of security operations.
